**EQUIPMENT AND TRAINING FOR RESCUE, SAFETY, ACCESS**

# ROOTED IN RESCUE

## A NEW LOOK FOR A FAMILIAR FRIEND

As CMC turns 40, it's natural to reflect on where we've been and what lies ahead. We helped to pioneer professional rescue and rope access, and we're delighted with the remarkable progress our industry has made. We are also proud of what we have been able to contribute to that progress.

In looking to the future, we realized that our old logo—a silhouette of a litter and tender on rope—did not fully represent the multi-faceted, employee-owned company that CMC has become. We decided to adopt a new logo that reflects our commitment to providing the highest levels of equipment and training to everyone who works at height.

Since 1978, our goal has been to help emergency service and rope access professionals do their jobs with more efficiency, greater safety, and less uncertainty. It still is.

The design of the new CMC logo is based on one of CMC's early signature products—the Figure 8 Descender with Ears. It's easy to see how the iconic shape of the Rescue 8 was adapted to connect CMC with its past.

## HANDS-ON TRAINING IN RESCUE AND ROPE ACCESS

A dedicated, applied-learning approach sets the CMC School apart from other instructional programs. In classes led by highly experienced instructors, students use the latest tools and techniques to solve realistic scenarios under real-life conditions. They gain knowledge and practical experience that can be directly applied to actual rescue and rope access operations.

We offer open enrollment classes at various locations globally. These intensive instructional sessions include rope rescue, confined space entry and rescue, trench rescue, and emergency building shoring.

We teach custom contract classes on site to meet a sponsoring agency or organization's specific needs. They can cover a broad range of rescue and rope access disciplines.

For additional information on open enrollment classes, custom contract classes, or CMC School consulting services, visit [cmcpro.com/school](http://cmcpro.com/school).

## IT ALL COMES DOWN TO THE DETAILS

When working at height, your harness can make the job easier or a whole lot harder. We think it should do the former, and that's how we've been building them for decades. That means paying attention to every aspect of harness design and construction. Things like configuring the front lift geometry and padding at the waist and legs to enhance overall weight distribution...and sourcing high-durometer foam and backing material to increase support without adding weight...and developing a rear waist-to-leg adjustment system that maximizes flexibility in positioning.

Your harness is the one piece of equipment you spend more time in physical contact with than anything else. Our goal is to offer a selection of harnesses with features that meet your individual needs while providing the right combination of safety, efficiency, and comfort—whether you're walking around during a long training day or suspended on rope for hours in a vertical operation.

PATENTED

**RECOMMENDED FOR:**

WORK AT HEIGHT | FALL PROTECTION IN INDUSTRIAL AND CONSTRUCTION APPLICATIONS

This figure-8 style fall-protection harness integrates CMC's patented SwitchPoint™ System to improve safety, mobility and comfort in post-fall scenarios. After a fall, a user can shift their body weight from the back dorsal connector to the front waist of the harness by activating a transfer mechanism. Now able to await rescue in a sitting position, the user has increased mobility and comfort, which may help delay onset of suspension trauma (orthostatic intolerance).

**FREETECH HARNESS ADVANCED FEATURES:**

## ANSI HARNESS CERTIFICATION STANDARDS

The American National Standards Institute (ANSI) has administered an engineering standardization system since 1918. ANSI Z359.11 Safety Requirements for Full Body Harnesses require a static test and a dynamic (drop) test.

The static test is conducted on all attachment points (fall arrest, travel restrict and work positioning). Where attachment points, such as shoulder or side D-rings, are intended for use in pairs, the test is done in pairs.

The dynamic test is conducted on the fall arrest attachment points (dorsal, sternal and waist). Both head-up and head-down tests are conducted on the dorsal attachment point, but only head-up on the sternal and waist attachment points.

All tests are conducted on a 100 kg (220 lb) test mass to a minimum peak impact force of 16 kN (3,600 lbf).

## MEETING NFPA CERTIFICATION STANDARDS

NFPA 1983 CERTIFICATION for Class II and Class III Life Safety Harnesses and Escape Belts require both a static test and a drop test.

THE STATIC TEST differentiates between load-bearing attachment points and positioning attachment points, with different load requirements for each. Where attachment points, such as shoulder or side D-rings, are intended to be used in pairs, the test is done on the pairs.

A DROP TEST is also required for each attachment point on a harness or belt. The test method uses a 136 kg (300 lb) manikin that is dropped 1 meter on a 1.2 meter steel lanyard. The standard stipulates that each harness and belt be tested both with a head-up drop and then a head-down drop.

## PRODUCTS CUSTOMIZED TO SUIT YOUR NEEDS

One of the benefits of CMC maintaining its own manufacturing facility is that we are readily able to modify existing products or create entirely new ones to satisfy customers' needs.

For example, we worked with Direct Relief International, a respected non-profit that sends medical aid to disaster areas around the world. They needed a secure way to organize and carry medical supplies. We designed and built a custom backpack that did the job.

In another instance, we created a customized version of our CSR<sup>2</sup> Pulley System for a national solar company. That system allowed them to decrease the time required for rooftop solar panel installation by 75%.

For an industrial diving company, we developed a specialized harness that is used to retrieve divers from a diving bell.

We also make special versions of existing CMC products at customers' request, such as:

- Modifying harnesses, packs, and bags with additional attachment points, gear loops, or pockets
- Making harnesses, packs, and bags in custom colors and sizes, and with other options
- Producing hardware with custom color anodizing and laser-engraved markings

Custom products have a reasonable minimum batch size. For more information, contact the CMC customer support team.

## Hardware

### IT'S SMART TO KEEP THINGS SIMPLE

There's an interesting trend in the new rigging hardware that's being introduced for rescue and rope access applications. Much of it is designed to perform more than one function, with a single device replacing multiple pieces of traditional hardware.

The forces driving this trend are obvious, and suggest that it's likely to continue. When you replace many pieces of equipment with one, there is less to carry into the field, and the likelihood of rigging errors is reduced. There's also an advantage in training. While these new devices may themselves be more complex, using them is quite the opposite.

Greater simplicity of use generally means that more people can be trained to rig and use the device properly. That results in higher levels of safety and efficiency—a worthy goal for any piece of hardware.

### DEFINE WHAT YOU WANT IN A ROPE— THEN BUILD IT

Developing a superior life safety rope takes a lot of knowledge about materials, rope construction, and manufacturing techniques. It also takes a well thought out vision of how that rope should perform, and a commitment to never settle for second best.

**No one knows that better than CMC.** We've been active in the creation of life safety rope for decades. As experienced users, we develop a set of desired specifications for strength, hand, knotability, packability and general performance. Then we work at making a rope that will meet those specifications until we get it right.

**CMC Static-Pro Lifeline** is an example. This ultra-static, high tenacity polyester lifeline was created specifically to meet our exacting standards. The result is a highly regarded rope considered by many rescue and rope access professionals to be the best lifeline of its kind available today.

## AN IDEA WHOSE TIME HAD COME

In the mid-1990s, when SPRAT® (the Society of Professional Rope Access Technicians) was formed, more and more people were being employed to do work at height. Unfortunately, there was no way for them to show potential employers—or for the employers to show OSHA—that they were qualified for the work.

A group of concerned individuals came together to remedy the situation. They were a virtual “who’s who” of the rope rescue industry—Jim Frank, founder of CMC; Steve Hudson and Loui McCurley of PMI; and Mike Roop of ROCO.

The group set to work, starting with the creation of a safe practices document. Within a few years, standards had been set and a core group of rope access technicians had been certified.

SPRAT has continued to grow. Today, thousands of rope access technicians working for companies and government agencies around the world have been certified to the non-profit organization’s standards.

# Anchors, Straps, & Tripods

## NECESSITY IS THE MOTHER OF INVENTION

In 1929, an Italian freighter broke up on offshore rocks at Bristol, England, and first responders had to improvise a high anchor to rescue survivors. ## EXPANDING ON THE PICK-OFF RESCUE

The pick-off is a time-honored technique, as demonstrated by this 1950s photo of a training exercise in the Bavarian Alps utilizing a now outdated (thankfully) tragsitz harness.

**A MODERN, RAPPEL-BASED PICK-OFF** involves transferring the subject's weight to the rescuer's descender. CMC's experience in teaching and performing pick-off rescues led to the development of our Pick-Off Strap as a more efficient way to quickly secure a subject and then transfer their weight.

**OTHER PRODUCT IDEAS FOLLOWED.** Our Load Release Strap is a compact, easy-to-rig way to release a load on the ratchet of a main line or a loaded belay line. The Adjustable Litter Strap provides a more efficient tender tie-in for low angle evacuations.

**THESE ARE JUST A FEW** of the original CMC designs that have been widely adopted by rescue professionals around the world.

## FASTLINK™ PICK-OFF STRAP

Two carabiners are incorporated directly into the strap, reducing overall weight.

# Patient Care & Transport

## FASTER, STRONGER, LIGHTER

It is a well established fact that the sooner an injured subject has access to advanced medical treatment, the greater their chances for recovery. A renewed recognition of this fact has been driving much of the innovation in emergency services equipment designed for patient care and transport.

Things like quick-connect buckles and simpler tie-in systems allow faster patient packaging in the field.

Litters made of strong, lightweight materials like titanium and advanced plastics make carryouts faster and easier.

And a whole new generation of products for helicopter extractions have been developed. In addition to increasing patient safety and comfort, they can literally help to save hours in situations where every minute counts.

# Personal Gear & Books

## BACK IN THE DAY

all you needed for work at height was a shirt, shoes, and pair of overalls. At least that's the takeaway from this 1930 photograph taken during construction of the Empire State Building.

Needless to say, things have changed. In addition to obvious differences—like standards for safety and training—we now judge personal gear the same way we examine every other tool that goes into the field. How well does it perform, and what levels of safety, functionality, and reliability can we expect it to provide?

## IMPORTANT WARNINGS

Many of the activities for which CMC products are used pose a very substantial risk of serious injury or death. Be certain you carefully review all of the following information. Products manufactured and sold by CMC Rescue, Inc. are intended for use by professionals trained and experienced in the use, inspection and maintenance of these products. All individuals using CMC products must have this same professional level of skill. Technical rescue, rappelling, climbing and the training involved are very hazardous activities. Each situation has its own unique conditions and must be evaluated by those present. Effective risk management comes from experience, proper training and good personal judgment.

**Limits of Liability** CMC is not liable for any damages arising from abuse or improper use of the equipment, failure to follow adequate safety precautions or breach of the duty of either the purchaser or user. Adequate training and judgment are needed to reduce the risks inherent in the use of this equipment. Since these risks are out of the control of CMC, the liability shifts to the user and purchaser.

**Duty of Purchaser and User** It is the responsibility of the purchaser and the user of products manufactured and sold by CMC to:

- Read the product instructions and labels and follow them. If you do not have a copy of the instructions, request a copy from CMC, 6740 Cortona Drive, Goleta, CA 93117.
- Inspect the product immediately after purchase and before and after each use. Read the note on inspection below.
- Receive training in the proper use of the equipment and in the appropriate techniques. Proper training includes safety procedures, limitations of the equipment, inspection of equipment and risk management. If you are not competent in the use of the product, do not use it. See the note on training below.
- Determine if the product is suitable for its intended use and that it meets all applicable standards and regulations. The manufacturer can provide assistance but cannot be expected to be knowledgeable of all worldwide standards and regulations.
- Use good judgment and do not exceed the limitations of the user's skill or of the equipment.
- Use adequate safety precautions, including belays and backup systems. Practice risk management at all times.
- Do not alter the product in any way. Repairs must be done only according to the manufacturer's instructions or returned to the manufacturer for repair. Alterations will void warranty.
- If the purchaser is not the user of the product, the purchaser must provide each user with a copy of this notice and the product instructions. If additional copies of this notice or the product instructions are needed, they can be obtained from CMC.

**Inspection** Each department involved in rescue operations is expected to have a policy for inspecting life-safety equipment. Inspection should be no less than after each use, and inspections must be done by personnel that meet the department's training standard for inspecting life-safety equipment. Inspection dates should be recorded on a tag attached to the equipment or in the equipment log. Each user should be trained in equipment inspection and should do a cursory inspection before each use.

**Training** It is the responsibility of the purchaser to ensure that the user is adequately and competently trained in the use of the product. Training is available from several sources, including the CMC School (see catalog pages 4-7 for school information).
